

STATEMENT OF CAPACITY

Northern Territory Onshore Gas Support Industry

Report updated: 21 February 2023

STATEMENT OF CAPACITY

Northern Territory Onshore Gas Support Industry

To support the developing onshore gas industry in the Northern Territory, a capability mapping and gap analysis study was undertaken to highlight the supporting trades, services and supply capacity currently existing, and identify potential capability 'low points' or gaps.

Information within this report was captured from the ICN database and used to measure the capabilities of businesses in the Darwin, Central, Top End, Katherine, Barkly and East Arnhem regions against 118 likely scopes of work required to service and supply the emerging sector.

In summary, a total of 1,250 unique businesses were identified in the study and had their capabilities matched against the identified scopes of work on 1,647 occasions. The study also identified 142 unique Aboriginal Majority Owned Businesses (AMOB) whose capabilities were matched to the likely scopes of work on 194 occasions.

Taking into account the remoteness of the proposed onshore gas development sites, the supply services trade category comprised the highest capability with 295 businesses mapped in this category, matching the scopes of work on a total of 410 occasions. The Professional Services category held the second highest capability, with 256 businesses matching the scopes of work on a total of 390 occasions. The highest representation of AMOB capability was found in the Professional Services trade category, with 49 Aboriginal-owned businesses being matched to the likely scopes of work on 66 occasions.

The exploration phase would immediately offer the highest level of contracts and opportunities for businesses undertaking civil, construction, fabrication, vehicles and machinery, and professional services. Once in the appraisal/drilling phase, the majority of the work then becomes highly specialised. During the drilling phase, the majority of the identified opportunities for local business lay outside the actual drilling and hydraulic fracturing processes such as transportation of water, removal of waste, camp management and supply services.

“As a lead proponent in the Beetaloo Sub-basin, Tamboran Resources Limited and its investment partners are absolutely committed to operating sustainably across all aspects of our business. A critical partnership for us is with ICN, where together we are seeking to boost major investment and employment opportunities right here in local Territory enterprises and workers. It is our vision to make sure that the strategic investments we make in the Territory provide maximum local economic, social and environmental benefit, and in particular securing major new growth and training opportunities for indigenous-owned businesses. Working closely together with ICN, we seek to also accelerate multibillion dollar growth in the Territory economy, with long-term global gas supply potential.”

Faron Thibodeaux
Chief Operating Officer, Tamboran Resources Limited

The findings of the study support the opportunity for future growth and development of business throughout the regional and remote areas of the Northern Territory. However, it is important to note that a significant number of regional businesses were included in the study that, while not currently working specifically on gas-related contracts, do have capabilities aligned with the future requirements of the emerging sector.

Key findings from this study include:

- Minor trade 'low points' have been identified that could result in enabling local industry to expand into or acquire new skills to meet these requirements.
- Opportunities identified from 'gaps' could result in further growth of Northern Territory Business if developed early enough. These opportunities may comprise of establishing quarries with hi-grade ceramic and sand proppant, produced water waste treatment and disposal techniques, remote telecommunications and satellite services, technical geological labs and increased medical services.

- Opportunities identified for future innovation including the possibility of growing of the guar plant which is used in the fracturing gel to release oil and gas in wells; and
- Further development of the logistics support and service industry by locating transportation hubs in Katherine, Tennant Creek or Alice Springs.

As per the findings of the study, the Northern Territory industry has a high level of competence in meeting the majority of the scopes associated with preparation of sites and supply to the sector. However, it should be noted that this evaluation solely pertains to the capability of businesses and does not take into account their capacity to handle the escalating demand from other projects in Northern Territory. ICN identified gaps within the drilling services, equipment and operations specialty group, indicating there are currently very low to no companies identified to service or supply on these packages.

“ Empire is proud of the role it is playing in the exploration, appraisal, and development of the world class Beetaloo basin.

Empire has invested more than \$100m to explore and appraise the Beetaloo, generating economic opportunities for the regions, traditional owners and all Territorians. Our company has already established strong connections with businesses in the region and is working hard to progress further opportunities as project activity increases.

The Beetaloo has the potential to generate vast economic benefits for the Territory, all Australians and the broader Asian region in the decades ahead. ”

Alex Underwood

Managing Director, Empire Energy Group Limited

ABOUT THE STUDY

In order to undertake this study, an understanding of relevant industry capability requirements first needed to be understood.

ICN engaged industry specialists to ascertain proponent work packages relevant to the onshore gas industry. Once finalised, ICN sought technical input to develop the final 118 likely packages of work which industry was then mapped against.

The industry specialists consisted of Oil & Gas representatives within the Northern Territory Government Department of Industry, Tourism and Trade and an external consultant specialising in the onshore gas industry.

Desktop research was then undertaken to identify businesses with the capacity to perform works to the likely scopes developed. This was achieved by:

- Reviewing the information contained in ICN profiles maintained on ICN Gateway
- Cross-checking industry website data
- Utilising the knowledge of ICN Industry Advisors
- Liaising directly with potential industry through email, phone, and one-on-one meetings

The report maps and delivers an understanding of the current local capability to undertake each scope identified and also establishes the work potentially being undertaken by non-Territory Enterprises. The report goes on to identify the number of businesses capable of providing support and supply services to the industry and the trades which service it.

KEY REQUIREMENTS FOR INDUSTRY

The States and Territories have primary responsibility for how their unconventional gas resources are regulated and developed. The last three Territory Governments have commissioned reviews and inquiries into the onshore shale gas industry in an attempt to address and alleviate community concerns in this regard. Following on from the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory undertaken between 2016 and 2018, the Northern Territory Government is nearing the completion of implementing all 135 recommendations of the inquiry against all current and future onshore resource explorations.

In the Northern Territory (NT), the granting of exploration permits and approval to commence petroleum exploration activities for proponents (which includes stimulation and well testing) rests with the Department of Industry, Tourism and Trade (DITT), through its administration of the Petroleum Act 1984.

Alongside the DITT approval process, the Northern Territory Environment Protection Authority (NT EPA) administers the Environmental Protection Act 2019; which allows for all proposals to be assessed as to the level of significance of potential impacts.

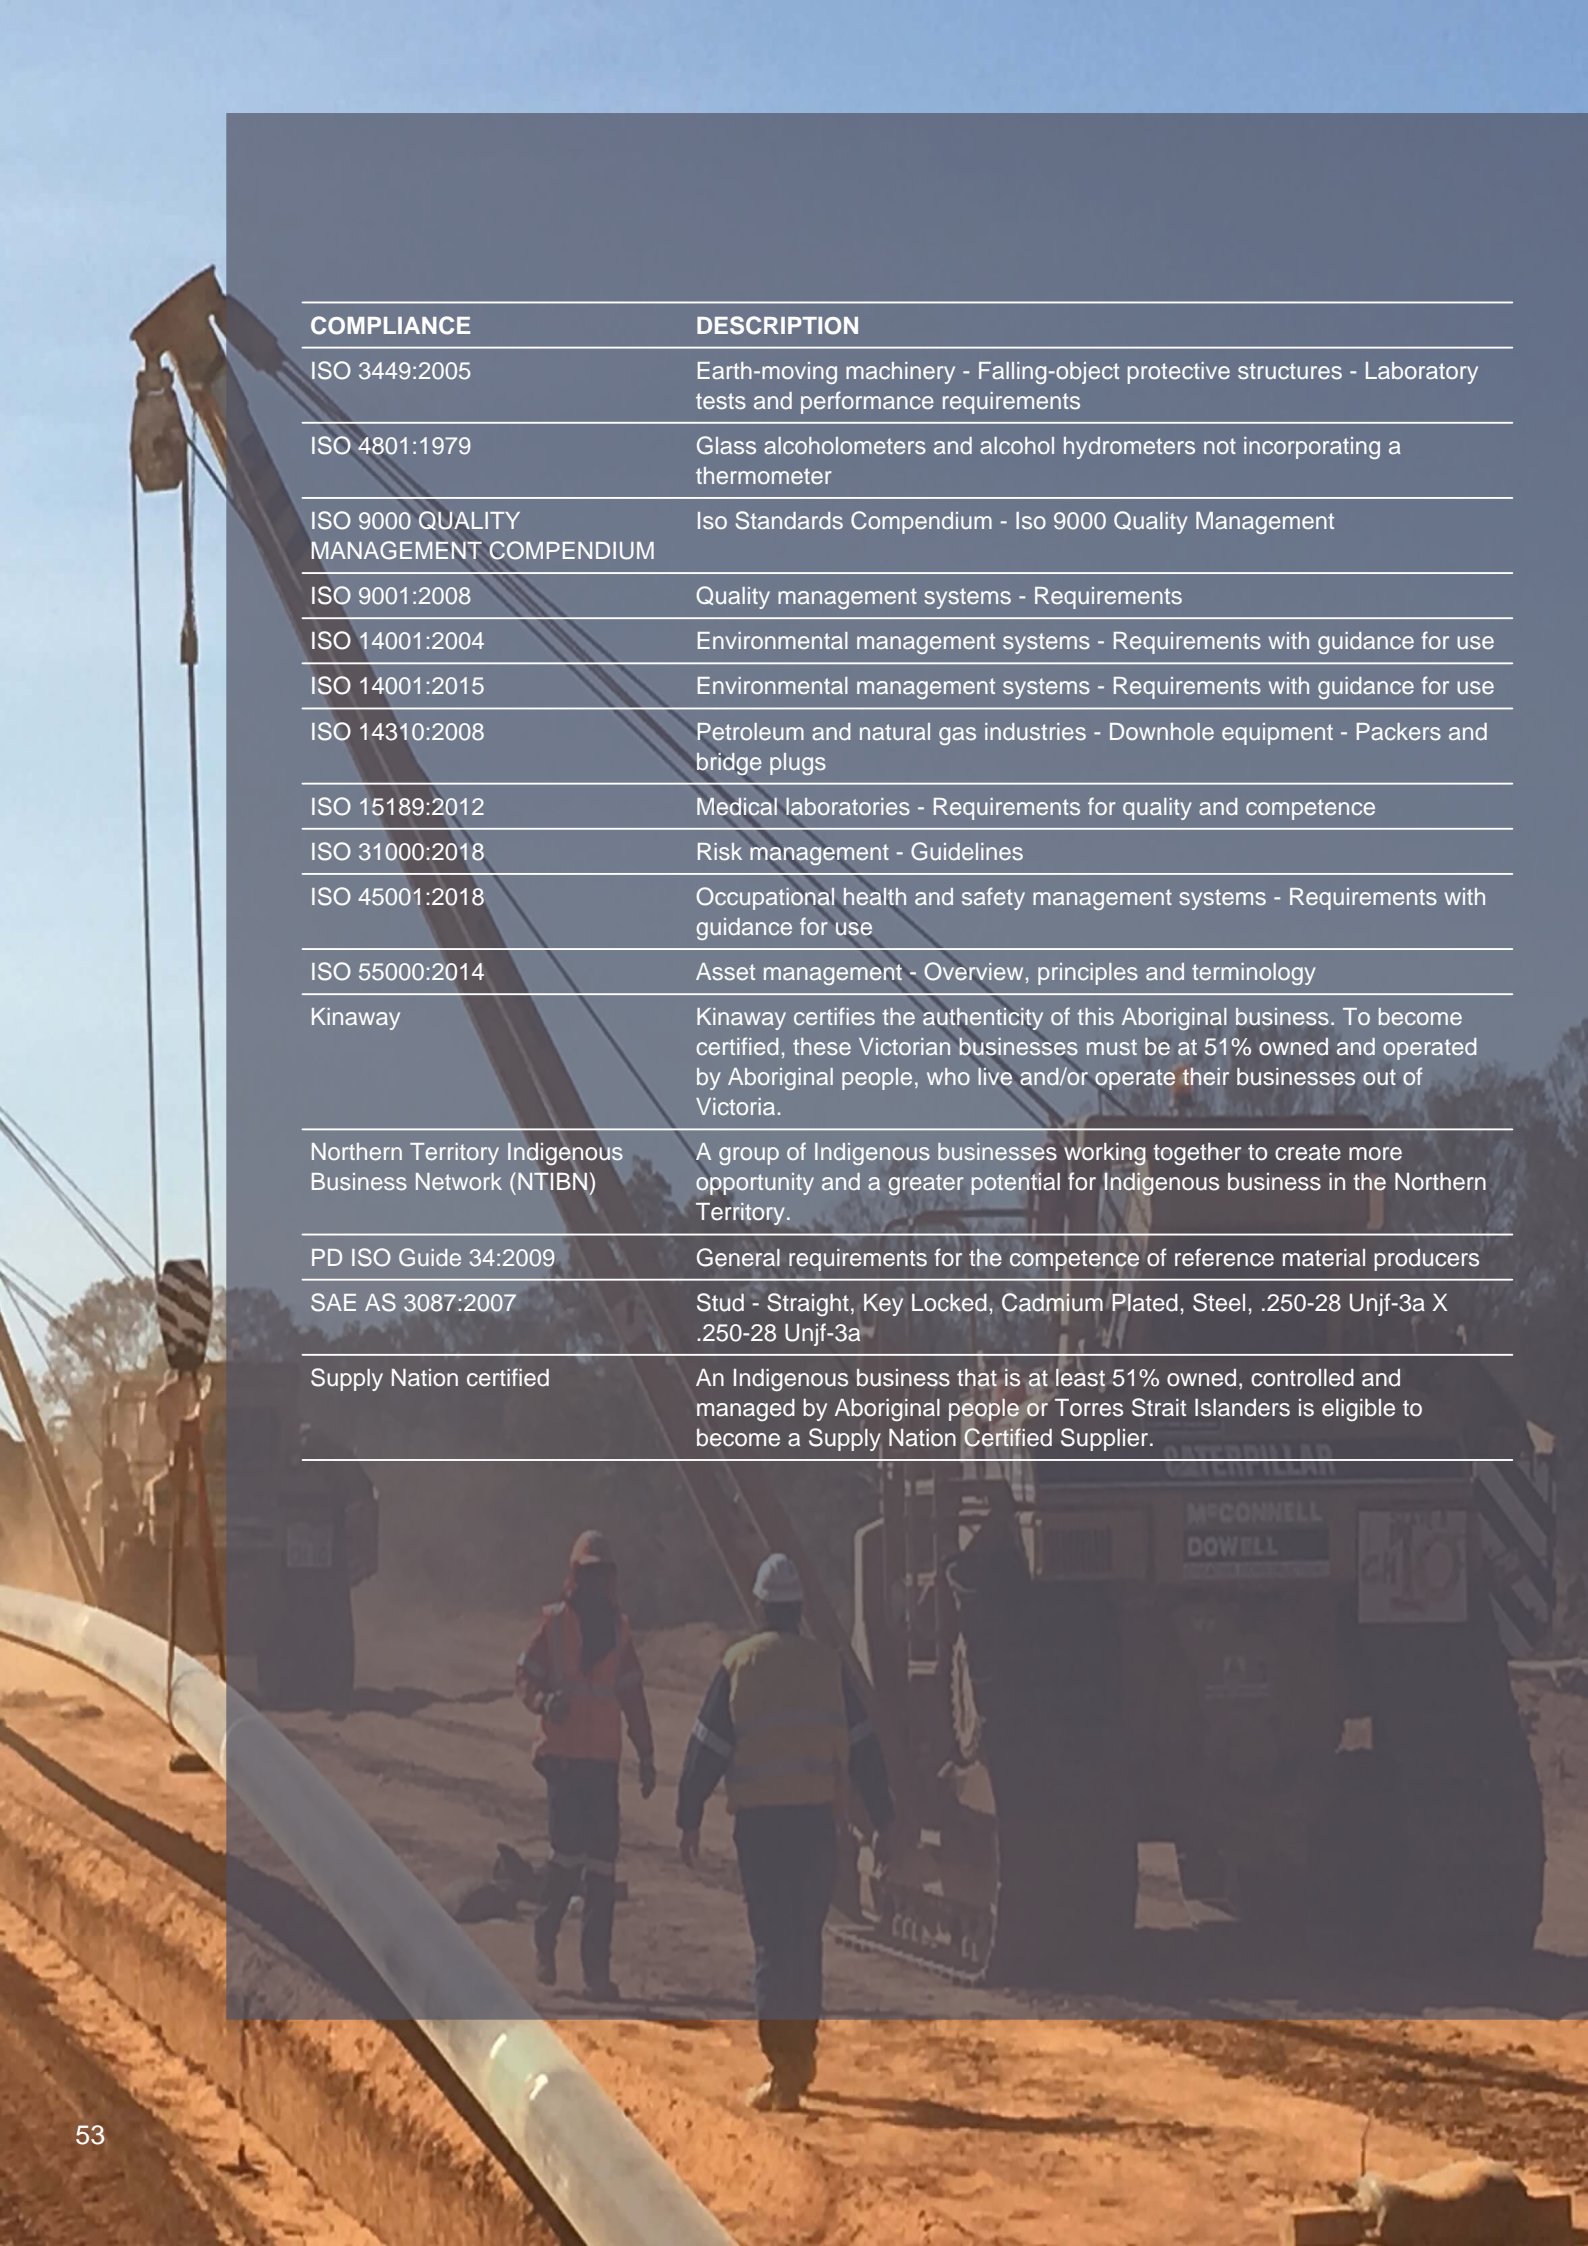

To ensure safety, licensing and required regulations are adhered to, petroleum operators who engage subcontractors and third parties to work on their site, set their own safety standards or prequalification requirements. These prequalification's act as risk minimisers and can stipulate requirements for environmental standards, quality management systems and other third-party accreditations, certifications or insurances to ensure safety risks are as low as reasonably practical.

The emerging onshore gas industry is still young in the Northern Territory, so regulations and policies continue to be developed. If companies are considering third-party contracts or opportunities, they would require their own contractor's license and insurances (either on a single job basis or as an on-going provision of labour and services basis) which would suit a high proportion of local SMEs.

In step with other capital-intensive sectors, petroleum operators in the onshore gas sector may prefer to engage with businesses that carry a low-risk profile and have prior experience on similar projects.

AS/NZS 3666.2:2011	Air-handling and water systems of buildings - Microbial control - Operation and maintenance
AS/NZS 3666.3:2011	Air-handling and water systems of buildings - Microbial control - Performance-based maintenance of cooling water systems
AS/NZS 3666.4:2011	Air-handling and water systems of buildings - Microbial control - Performance-based maintenance of air-handling systems (ducts and components)
AS/NZS 3800:2012	Electrical equipment for explosive atmospheres - Repair and overhaul
AS/NZS 4308:2008	Procedures for specimen collection and the detection and quantitation of drugs of abuse in urine
AS/NZS 4801:2001	Occupational Health and Safety Management Systems
AS/NZS ISO/IEC 17020:2013	Conformity assessment - Requirements for the operation of various types of bodies performing inspection
AS/NZS ISO 3834.2:2008	Quality requirements for fusion welding of metallic materials - Comprehensive quality requirements
AS/NZS ISO 9001:2008	Quality management systems - Requirements
AS/NZS ISO 9001:2015	Quality management systems - Requirements
AS/NZS ISO 9001:2016	Quality management systems - Requirements
AS/NZS ISO 14001:2004	Environmental management systems - Requirements with guidance for use
AS/NZS ISO 14001:2016	Environmental management systems - Requirements with guidance for use
AS/NZS ISO 31000:2009	Risk management - Principles and guidelines
AS 1668.2:2012	The use of ventilation and airconditioning in buildings - Mechanical ventilation in buildings
AS 1851:2012	Routine service of fire protection systems and equipment
AS 2337.1:2004	Gas cylinder test stations - General requirements, inspection and tests - Gas cylinders
AS 2419.2:2009	Fire hydrant installations - Fire hydrant valves

COMPLIANCE	DESCRIPTION
AS 2700-2011	Colour standards for general purposes
AS 3850-2003	Tilt-up concrete construction
AS ISO/IEC 17025-2005	General requirements for the competence of testing and calibration laboratories
AS ISO 15189-2013	Medical laboratories - Requirements for quality and competence
AS ISO 22000-2005	Food safety management systems - Requirements for any organization in the food chain
ASTM ISO9001-00	Quality management systems - Requirements
ASTM ISO14001-04	Environmental management systems - Requirements with guidance for use
ASTM ISO14004-04	Environmental management systems - General guidelines on principles, systems and supporting techniques
BS EN 14801:2006	Conditions for pressure classification of products for water and wastewater pipelines
BS EN 55032:2012	Electromagnetic compatibility of multimedia equipment. Emission requirements
BS EN 60079-0:2012 A11:2013	Explosive Atmospheres - Part 0: Equipment - General Requirements
BS EN ISO/IEC 80079-34:2011	Explosive atmospheres. Application of quality systems for equipment manufacture
BS EN ISO 9001:2015	Quality management systems. Requirements
BS ISO 6396:2008	Earth-moving machinery. Determination of emission sound pressure level at operator's position. Dynamic test conditions
BS OHSAS 18001:2007	Occupational Health and Safety Management
Building Code 2013	The Building Code 2013 is the Code for the Tendering and Performance of Building Work 2013 (the Building Code)
Building Code 2016	The Building Code 2016 is the Code for the Tendering and Performance of Building Work 2016 (the Building Code)
DD CEN ISO/TS 29001:2011	Petroleum, petrochemical and natural gas industries. Sector-specific quality management systems. Requirements for product and service supply organizations
Defence Industry Security Program (DISP)	The Department of Defence, in consultation with industry, has reformed DISP to provide industry increased opportunities to work with Defence and easier access to Defence security services.
HACCP	Hazard Analysis Critical Control Point
ISO/IEC 17020:2012	Conformity assessment - Requirements for the operation of various types of bodies performing inspection
ISO/IEC 17025:2005	General requirements for the competence of testing and calibration laboratories
ISO/IEC 17025:2017	General requirements for the competence of testing and calibration laboratories
ISO 2631-1:1997	Mechanical vibration and shock - Evaluation of human exposure to whole-body vibration - Part 1: General requirements

COMPLIANCE	DESCRIPTION
ISO 3449:2005	Earth-moving machinery - Falling-object protective structures - Laboratory tests and performance requirements
ISO 4801:1979	Glass alcoholometers and alcohol hydrometers not incorporating a thermometer
ISO 9000 QUALITY MANAGEMENT COMPENDIUM	Iso Standards Compendium - Iso 9000 Quality Management
ISO 9001:2008	Quality management systems - Requirements
ISO 14001:2004	Environmental management systems - Requirements with guidance for use
ISO 14001:2015	Environmental management systems - Requirements with guidance for use
ISO 14310:2008	Petroleum and natural gas industries - Downhole equipment - Packers and bridge plugs
ISO 15189:2012	Medical laboratories - Requirements for quality and competence
ISO 31000:2018	Risk management - Guidelines
ISO 45001:2018	Occupational health and safety management systems - Requirements with guidance for use
ISO 55000:2014	Asset management - Overview, principles and terminology
Kinaway	Kinaway certifies the authenticity of this Aboriginal business. To become certified, these Victorian businesses must be at 51% owned and operated by Aboriginal people, who live and/or operate their businesses out of Victoria.
Northern Territory Indigenous Business Network (NTIBN)	A group of Indigenous businesses working together to create more opportunity and a greater potential for Indigenous business in the Northern Territory.
PD ISO Guide 34:2009	General requirements for the competence of reference material producers
SAE AS 3087:2007	Stud - Straight, Key Locked, Cadmium Plated, Steel, .250-28 Unjf-3a X .250-28 Unjf-3a
Supply Nation certified	An Indigenous business that is at least 51% owned, controlled and managed by Aboriginal people or Torres Strait Islanders is eligible to become a Supply Nation Certified Supplier.
