STATEMENT OF CAPACITY

Aquaculture and Crocodile Farming Industry in the Northern Territory

STATEMENT OF CAPACITY

Aquaculture and Crocodile Farming in the Northern Territory

To support the thriving aquaculture and crocodile farming industry of the Northern Territory and Western Australia's Kimberley region, a capability mapping and gap analysis study was undertaken to highlight the supporting trades, services and supply capacity.

The Northern Territory Government commissioned the Industry Capability Network of the Northern Territory (ICN NT) to produce the report.

Information for this report was captured from the ICN database and used to measure the capabilities of businesses within the Darwin, Katherine, Arnhem and Kimberley regions against the likely scopes of work required to service and supply.

In summary, a total of 749 unique businesses had their capabilities matched against the identified scopes of work.

Approximately 624 businesses were identified as service providers and 143 were identified as potential suppliers/wholesalers.

The study also identifies 47 unique Aboriginal-owned businesses whose capabilities were matched to the likely scopes of work on 102 occasions. The Civil and Construction trade category held the highest content of capability from majority Aboriginal-owned businesses, with the 18 unique businesses identified in this category, matching the scopes of work on a total of 40 occasions. The bulk earthworks and grading services scopes of work held a considerably higher content of Aboriginal-owned business capability than the other scopes.

The study identified the need for businesses within the northern region to accurately understand and engage with various biosecurity protocols as set by project owners or operators in the industry.

“Over the past ten years, crocodile farming has evolved from a small cottage industry into a significant contributor to the Northern Territory and Australian economies. In pursuit of excellence we have become a well-regarded exporter of high calibre skins, acknowledged internationally for the consistency of supply and quality of product.

Our commitment as an industry is to continually improve our farming practices to ensure that we remain a globally recognised, responsible industry player operating world best practice in crocodile farming techniques. Achieving this requires significant ongoing investment in farming infrastructure to increase both quality and capacity, enabled by access readily available, pre-qualified local contractors and suppliers. The benefits of which will not only reach individual farms, but also the industry and the Territory as a whole.”

Michael Burns
Managing Director, Porosus

Environmental management compliance systems such as ISO 14001, insurances, and warranties against the products and services local businesses provide, will act as a key mitigating factor when considering which businesses hold capacity for the various contracts and scopes on offer. The adherence to these prequalification requirements are likely to represent the greatest hurdle for local businesses.

Overall, the study has concluded that the Darwin, Katherine, Arnhem and Kimberley regions currently hold a high level of capacity to service the current demand of the aquaculture and crocodile farming industry with an overwhelming 78% majority of the business capability existing in the Greater Darwin Region, followed by 12% in the Kimberley region, 8% in Katherine and 2% in the Arnhem region.

While interviewing key project operators currently engaged in the sector throughout the Northern Territory, it was apparent that while a niche market already exists within the Territory, the opportunity for growth and development is noteworthy. Most significantly, aquaculture provides an opportunity for local businesses in the focus region to establish themselves within the supply chain of future projects and expansions.

With the primary project in the region, Seafarms 'Project Sea Dragon', progressing towards the conclusion of a final investment decision and construction, significant opportunities have been identified for businesses to engage in an emerging, sustainable, fast growing and local industry.

Picture supplied by Seafarms Group Ltd.

“ The economic significance of the Northern Territory seafood industry extends well beyond the unique coastal communities for which it is vital. Professional fishing operations, such as seafood wholesalers, processors, and retailers, all contribute millions of dollars annually to the NT's economy. Our seafood industry has more than 200 commercial fishing licenses and 190 registered fishing vessels operating in 15 different wild harvest and aquaculture fisheries.

Over the past decade, the NT aquaculture sector has been the most significant contributor of the NT seafood industry, with further growth and development underway. There is an opportunity to improve practices and further the reputation of the Northern Territory seafood industry in a way that encourages community support and financial viability. Together, we must develop a path forward that is both sustainable and appropriate. ”

Katherine Winchester
Chief Executive Officer, Northern Territory Seafood Council

COMPLIANCE: Represents the range of industry accreditations held by capable businesses

ABOUT THE STUDY

To undertake this Industry Capability Mapping Study highlighting the aquaculture and crocodile farming service and supply capabilities that exist in the Northern Australian regions, ICN first needed to understand the service and supply requirements of the industry.

ICN engaged industry experts to ascertain the requirements that industry must meet to be involved in the sector, and to identify any known barriers to entry. The industry experts consisted of licensee committees, industry groups, government departments and businesses already engaged in the aquaculture sector.

The extensive information gathered from these experts was reviewed and disseminated by ICN into different classification tiers, scope requirements and the accreditations and/or certification requirements industry must comply with to be involved in the sector. The experts verified this categorised information and provided further advice around the standard minimum requirements to classify capability against the scopes.

Research was then undertaken by ICN identifying businesses with the capability and capacity to perform works against these scopes of work.

The report identifies businesses that hold the current capability to undertake each scope identified. ICN found that most businesses typically had a business size of small to large (5 – 200+ employees) who also had proven experience against each respective scope they are mapped to, and referenced their prior experience working on large scale projects.

The report also identifies the number of businesses capable of providing wholesale or retail supply services to the industry, and the trades which service it.

KEY REQUIREMENTS FOR INDUSTRY

Aquaculture in Australia is managed under strict environmental guidelines. While the Australian Government has a number of important functions in relation to aquaculture, including national programs for research, management of biosecurity, aquatic animal health, food safety, environmental management, and market access and trade, most elements of the regulation of domestic aquaculture production rest with the states and territories.

All Australian states and territories are signatories to the Australian Government policy on aquaculture. All parties commit to working in partnership with the aquaculture industry to achieve maximum sustainable growth, while meeting expectations for environmental, social and economic performance.

In the Northern Territory, the NTG's Fisheries division within the Department of Primary Industry and Resources manages the licencing and approvals for all commercial fishing and aquaculture operations. The division also provides advice on the planning and suitability of sites, animal health advice and testing services, as well as assisting investors in reaching a range of government agencies.

Businesses that intend to service or supply the aquaculture industry must be aware of the requirements of the sector and ensure adherence, otherwise, they will be liable for penalties under the Northern Territory Fisheries Act to which the project is committed.

To ensure licencing regulations and requirements are adhered to, project owners who engage subcontractors or third parties to work on their operation set minimum standards or prequalification's for their subcontractors. These prequalification's act as risk minimizers and can stipulate requirements for environmental standards, quality management systems and other third-party accreditations, certifications or insurances that may reduce the risk of engagement.

COMPLIANCE	DESCRIPTION
